I am Hanna Geremew, and I am from Ethiopia Amhara region. I have always had a deep interest in technology and its potential to improve lives. I am a year computer science student at Bahir Dar University. Over time, my curiosity shifted towards web development because it provides an avenue for creativity, problem-solving and connecting people worldwide.

Web development caught my attention as a field where creativity meets functionality. My academic interest in Computer Science, has strengthened my fascination with coding and building tools that can enhance how we interact online. The challenges of creating efficient, user-friendly websites fuel my desire to learn more and improve my skills.

What truly sparked my interest in web development was practicing small projects with our department students in campus, trying to learn by 'You Tube' videos and running-through the project and so on. The ability to design and create something from scratch is exhilarating, and I want to keep learning through time to build better, more responsive web solutions for a better tomorrow.

I believe I am the ideal candidate for this scholarship because of my strong determination and unique inner capabilities. My life has shaped me into someone who is resilient, disciplined, and always eager to learn from the past. I came from a background where resources were scarce, and I have to work hard to achieve to the level of my goal I envisaged for through this opportunity.

In terms of education, I have already taken steps to learn more about web development through 'You Tube' video. I have faced challenges in accessing resources and ease understandings, but my commitment to overcoming obstacles and expanding my knowledge has always pushed me forward to excel more.
I am ready to face any challenges that come with this course because I thrive when working on difficult projects. One of my proudest accomplishments was:
(1) Passing University Entrance exam,
(2). Joined to computer science department which I considered as an accomplishment because it taught me to study hard.

Hope, this scholarship is a springboard to the next step in my career development. With this in mind, I will be able to focus on my studies without the added financial strain. My career goal is to become a proficient web developer, contributing to projects that improve accessibility and user friendly on the web. I aim to see myself in 10 years ahead as a senior expert in web development, a role model in leading a development team and building innovative solutions that make differences.

Given the financial hardship I am currently facing due to my father's non-permanent income who works as a daily laborer and my mother is a house wife. Our family's financial support is solely depending on my father's daily income. His income is not sufficient to run the live of the whole family. So this scholarship will allow me to access the education I dreamed without worrying about financial constraints. It will have played a role in my future career development. So does have an impact in my future.

Currently, I am a computer science student directly associated with the course intended to be given in your scholarship schedule which will lay down a base for my life and having a golden time to develop my skill .To balance my responsibilities and my education, I am committed to dedicating at least 4 hours a day for this course. I plan to adjust my schedule for the efforts to be exerted for the courses to be given for the effective accomplishments, such as prioritizing tasks or cutting down on unnecessary activities.
